Yhdistys haluaa hakea / Förteckning föreningen ansöker till / List which the association wishes to apply to
Ensimmäiseen luetteloon / Första förteckningen / The first list
<p>Aalto Analytics Society exists to meet the growing demand for analytics skills. We aim to inspire, educate and grow Aalto's data science community. Aalto Analytics Society brings together Aalto University students interested in the discipline of data analysis (and its related fields). The club aims to raise awareness regarding the importance of data analysis as a field, to all stakeholders of Aalto University. In addition, the association supports its members' interests and development in expanding their understanding of data analytics as well as using any tools, processes or instruments related to data analytics. Lastly, the association aims to bridge the gap between student's interests in data analytics, university schools, and employers in the field.</p> <p>Aalto Analytics Society's primary activity is to organise events about analytics targeted for students. There will be five main events, with one held in each of the five academic periods. However, in the first period of operation, we will focus on recruiting students and partnering with employers rather than events. The events will feature presentations from employers. Organisations will have a five minute opportunity to advertise their business, but the primary content of their presentation will be either:</p> <ul style="list-style-type: none"> - Learning about a real business application of analytics that delivers value - Hackathons applying student's learning to real business data - Seminars on how to use analytics tools such as Tableau - Sharing knowledge about how and when to use certain methods, such as deep learning versus other methods <p>The association is applying for AYY's association register in order to:</p> <ul style="list-style-type: none"> - link more closely with other associations interested in analytics - use the association newsletter to notify people of events they may be interested in - raise the profile of the association within AYY
